

Fixing elements for solar panels

Stainless steel fixing elements

Gradually we approach to more environmental friendly solutions. One of them is green energy together with the design of elements and products, and the use of a sustainable raw materials such as stainless steel, will facilitate the recycle and reuse of each part of everything.

Acerinox manufactures the stainless steel grade **AISI 430** that the Polish company **Investa**, uses to make the hooks for solar panels. A great variety of models adjusted to all of most popular types of roofs. This grade ensures perfect properties for bending, forming, laser cutting, guillotine cutting and pneumatic punching. Final hooks are easy to assemble and give stability and durability of the final construction.
